Inferential Problems concerning β_1

- ▶ Based on Least Squares method, we have the estimator of slope β_1 , $\hat{\beta}_1$, but this doesn't answer some of the most important inferential problems.

Inferential Problems concerning β_1

- ▶ Based on Least Squares method, we have the estimator of slope β_1 , $\hat{\beta}_1$, but this doesn't answer some of the most important inferential problems.
- ▶ Is $\hat{\beta}_1$ unbiased?

Inferential Problems concerning β_1

- ▶ Based on Least Squares method, we have the estimator of slope β_1 , $\hat{\beta}_1$, but this doesn't answer some of the most important inferential problems.
- ▶ Is $\hat{\beta}_1$ unbiased?
- ▶ What's the (estimated) standard error?

Inferential Problems concerning β_1

- ▶ Based on Least Squares method, we have the estimator of slope β_1 , $\hat{\beta}_1$, but this doesn't answer some of the most important inferential problems.
- ▶ Is $\hat{\beta}_1$ unbiased?
- ▶ What's the (estimated) standard error?
- ▶ How to get Confidence Interval of β_1 ?

Inferential Problems concerning β_1

- ▶ Based on Least Squares method, we have the estimator of slope β_1 , $\hat{\beta}_1$, but this doesn't answer some of the most important inferential problems.
- ▶ Is $\hat{\beta}_1$ unbiased?
- ▶ What's the (estimated) standard error?
- ▶ How to get Confidence Interval of β_1 ?
- ▶ How to perform Hypothesis Test and get P -value about null hypothesis $H_0 : \beta_1 = 0$
